Give your customers something new!

Rhinestone embellishments are in high demand in the decorated apparel industry. Now you can create custom rhinestone designs quickly and affordably with the Ioline CrystalPress™.

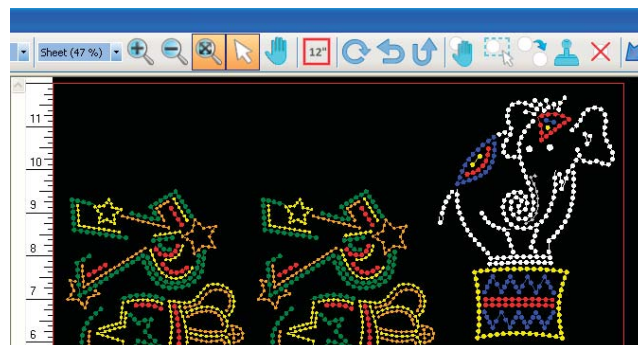

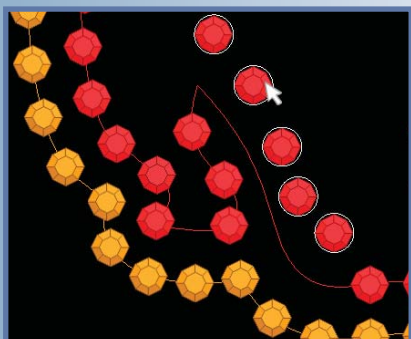

The Ioline CrystalPress™ is an automatic rhinestone placing machine that allows you to create heat transfer motifs in a matter of minutes. Impress your customers with your creativity building fresh designs found nowhere else.

- Create your design and see the results in minutes. No more waiting for motifs to arrive by mail or losing profit to someone else.
- Quickly create virtual samples that help close orders before they find your competition.
- Build loyalty and referrals by serving your customers in hours instead of weeks.
- Explore new markets and win customers with bold designs mixing Metal Octagon Rhinestuds and Crystals.

CrystalStudio™ Software Included!

Included with the Ioline CrystalPress™ is the CrystalStudio™ software. It takes designs from programs like Ioline Design™, CorelDRAW®, and Adobe Illustrator® and turns them into Rhinestone transfers at the click of a button. Keep working while printing on up to 4 machines at the same time.

Designed with customization in mind, edit individual crystals or entire sections with a mouse click. Add multiple designs on a single motif then mix rhinestuds and crystals together for stunning results. Making copies of the same design? CrystalStudio can fill a 31.5" transfer sheet doing the work for you.
